# Fire Extinguisher Safety

When used properly, a portable fire extinguisher can save lives and property by putting out a small fire or controlling it until the fire department arrives. Portable extinguishers, intended for the home, are not designed to fight large or spreading fires. However, even against small fires, they are useful only under certain conditions:

- The operator must know how to use the extinguisher. There is no time to read directions during an emergency.
- The extinguisher must be within easy reach and in working order, fully charged.
- Some models are unsuitable for use on grease or electrical fires.

### **Classes of Fires and Fire Extinguishers**

Class "A:" This class involves ordinary combustibles such as paper, wood, cloth, rubber, or plastics. The common extinguishing medium is water or dry chemical.

Class "B:" Flammable liquids, grease, or gases are covered under this category. Common extinguishing media are foam, carbon dioxide, or dry chemical.

Class "C:" Live electrical fires are class C fires. CO2 or dry chemical extinguishers should be used. However, the actual burning products may be class "A" items.

Class "D:" Burning materials include combustible metals such as magnesium and sodium. Special extinguishing agents, approved by recognized testing laboratories, are needed when working with these metals.

# **Use Your Judgement**

When you see smoke or fire you should use your own good judgment before you decide to extinguish the blaze. Ask yourself these questions:

- Is the fire limited in size and spread?
- Will you have an escape route if something goes wrong?
- Do you know the location of the nearest fire extinguisher?
- If you are confident the fire is controllable and your safety is ensured, attempt to put it out. If the answer to any of these questions is no, evacuate the area immediately.

## **Responding to the Fire**

Once you have decided to extinguish the blaze attempt to fight the fire only if:

- You know the type of combustible material burning.
- You have been trained to use the fire extinguisher correctly.
- The fire is still in the incipient (beginning) stage.

If the fire gets too large or out of control, evacuate immediately.

#### **Remember P-A-S-S**

- P Pull. Pull the locking pin before using the fire extinguisher.
- $\bullet$  A Aim. Aim the fire extinguisher at the base of the fire, not at the flames or smoke.
- S Squeeze. Squeeze the lever of the fire extinguisher to operate and discharge.
- $\bullet$  S Sweep. Sweep the fire extinguisher back and forth at the base of the fire to extinguish.

Most extinguishers will only allow about 10 seconds of extinguishing media. Prevention is the key when it comes to firefighting. Good housekeeping, proper storage procedures, and safe work practices will go a long way toward reducing the likelihood that a fire will destroy valuable property or injure either you or a fellow employee.
